

COMMERCIALIZATION & ENTREPRENEURSHIP AT JOHNS HOPKINS UNIVERSITY

Johns Hopkins Technology Ventures (JHTV) is the commercialization and entrepreneurship hub of the university, responsible for fostering a rich innovation ecosystem and bringing Johns Hopkins discoveries to market. We help innovators and entrepreneurs safeguard and commercialize intellectual property, develop startups into sustainable ventures and forge strategic collaborations with industry.

JHTV'S THREE BUSINESS UNITS

TECHNOLOGY TRANSFER

Overseeing all aspects of intellectual property and technology licensing, this team determines which inventions to protect, manages a robust patent portfolio and processes MTAs and NDAs. Investigators are encouraged to engage with this team at an early stage before publicly disclosing their research and can leverage technology development grants managed by JHTV.

CORPORATE PARTNERSHIPS

The university's front door for companies seeking collaboration with world-class academic innovators, this team serves as a resource to faculty in securing and managing industry partnerships to advance discovery. This team specializes in brokering and managing collaborations grounded in sponsored research and assisting in the formation, execution and management of these partnerships.

FASTFORWARD

This team helps university technologies and startups launch and scale by providing access to mentorship, funding sources, business experts, and additional commercialization resources. They leverage industry experience to accelerate high-impact projects and offer regular educational programming on customer discovery and domain-specific innovation. The Pava Center team supports student, alumni, and community ventures.
